so  $D_i F(a)$  is simply the result of differentiating  $F$  as a function of the single variable  $x_i$ , holding the remaining variables fixed. Example 1 If  $f(x, y) = xy$ , then  $D_1 f(x, y) = y$  and  $D_2 f(x, y) = x$ . If  $g(x, y) = e^x \sin y$ , then  $D_1 g(x, y) = e^x \sin y$  and  $D_2 g(x, y) = e^x \cos y$ . To return to the matter of the tangent plane to  $S$  at  $F(a)$ , note that

Advanced Calculus. This rigorous two-part treatment advances from functions of one variable to those of several variables. Intended for students who have already completed a one-year course in elementary calculus, it defers the introduction of functions of several variables for as long as possible, and adds clarity and simplicity by avoiding a mixture of heuristic and rigorous arguments.
